Application No.: 10/531,888 MAT-8683US

Amendment Dated: October 29, 2008 Reply to Office Action of: July 29, 2008

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

 (Currently Amended) A method for a router setting, the method comprising:

executing, by a first-router-device, a virtual-router-process for operating, virtually as one-router-device, a plurality of router-devices-connected to a local-area network, in order to send information which is required for the virtual-router process;

requesting, by a second-mobile router device, the virtual router information for a virtual router process when the second-mobile router device detects a connection to the a local area network;

transmitting, by a first router device, the virtual router information in response to the request by the mobile router, the first router device operating as a virtual router;

receiving the virtual router information by the second mobile router device; and

making a setting required for the virtual router process by the seeond-mobile router device, on-a-basisbased on-of-the virtual router information;

wherein the <u>virtual router information includes a priority of the first router device and a preference indicating whether a performance of the first router device is sufficient for operating as a master router device, and the mobile router device calculates its priority based on the priority of the first router device and the preferencesecond router device is a mobile router device newly connected to the local network, and the first router device sends the information to the second-router device based on the request-by the second router device.</u>

2.-3. (Cancelled).

 (Currently Amended) A router setting method according to claim 1, wherein the <u>virtual router</u> information includes a virtual router identifier, a virtual IP address and a virtual MAC address.

- 5.-6. (Cancelled).
- 7. (Currently Amended) A mobile router device comprising:

a-virtual router processing section for operating, virtually as one router device, a plurality of router devices connected to a local area network:

a requesting section for requesting virtual router information, for a virtual router process, from another router device operating as a virtual router when the mobile router device detects a connection to a local area network;

a receiving section for receiving the requested virtual router information sent from another the other router device, the information is information required for the virtual router process; and

a virtual router information processing section for making a setting required for the virtual router process, en a basis of based on the <u>virtual router</u> information_s;

wherein the virtual router information includes a priority of the other router device and a preference indicating whether a performance of the other router device is sufficient for operating as a master router device, and the mobile router device calculates its priority based on the priority of the other router device and the preferencethe router device is a mobile router device newly connected to the local area network;

the virtual router information processing section executes a process to request the information when the information processing section detects a connection to the local area network, and

the other router device sends the information to the virtual router information processing section device based on the request.

8.-10. (Cancelled).

Amendment Dated: October 29, 2008 Reply to Office Action of: July 29, 2008

11. (Currently Amended) A <u>mobile</u> router device according to claim 7, wherein the virtual router information processing section, when receiving a request for the <u>virtual router</u> information, further executes a process to send the <u>virtual router</u> information being set as a response thereto to the <u>other</u> router <u>devices ending</u> the request.

12.-14. (Cancelled),

- (Currently Amended) A <u>mobile</u> router device according to claim 7, wherein the information processing section sends the information at a regular interval.
 - 16.-19 (Cancelled).
- (Currently Amended) A method for a router setting method according to claim 1, wherein the <u>virtual router</u> information includes a real IP address of the first router device.
- 21. (Currently Amended) A <u>method for a router setting method-according</u> to claim 1, wherein the <u>virtual router information includes a virtual MAC address of the first router device.</u>
- 22. (Currently Amended) A <u>mobile</u> router setting method<u>device</u> according to claim 7, wherein the <u>virtual router</u> information includes a real IP address of the other router device.
- 23. (Currently Amended) A <u>mobile</u> router setting method<u>device</u> according to claim 7, wherein the <u>virtual router</u> information includes a virtual MAC address of the other router device.
- 24. (Currently Amended) A <u>method for router setting method-according to</u> claim 1, wherein the <u>virtual router information includes</u> a preference for the <u>second mobile</u> router device to calculate its own priority.
- 25. (Currently Amended) A <u>mobile</u> router setting method<u>device</u> according to claim 7, wherein the <u>virtual router</u> information includes a preference for the second <u>mobile</u> router device to calculate its own priority.
